- (1) In air @ 25° C and 1 atm. Expected life varies inversely with changes in O₂ concentration, temperature, pressure.
- (2) Under constant conditions. Calibrate as near sample conditions as possible. Sensing Surface should point downwards. Calibrate with 95-100% oxygen for measurements > 40% oxygen.
- (3) Once the signal output stabilizes following a step change in temperature.
- (4) Recommended 0-40° C. Sensors may be stored at -10 to 55° C on an intermittent basis only, not to exceed 2 months.
- (5) Ex-factory unless agreed to in writing. Under normal application conditions sensor is warranted to be free of defects in material and workmanship for the period specified above provided the sensor is properly installed and operated.
