Position: Systems Calibration Assistant

Office: Michell Instruments UK

Departments: Operations

Job Description: Systems Calibration Assistant

Working as part of a team of technicians and engineers for a company with a global reputation for providing high quality instrumentation and sampling systems. We have an interesting and varied role within our Systems Manufacturing area for someone with an analytical approach wanting to develop their knowledge and skills. This is an ideal opportunity for someone to be involved in the Calibration of process analyser and calibration systems.

- Assist with calibrating, process analyser and calibration systems working to engineering work instructions
- Mount sub-assemblies into bespoke enclosures and pre-test prior to calibration, this will occasionally include some building of sub-assemblies.
- Some wiring from components to junction boxes etc.
- Conduct electrical, pressure and function testing, recording results for certification.
- Assist in the calibration of Process Analyzers, Sensor Cells, Calibration instruments and complete sampling systems
- Be actively involved in the team during Factory Acceptance Tests

Required skills

- Enthusiastic with good communication skills
- Self-motivated with high levels of commitment.
- Quality driven
- Analytical approach
- Good understanding of mechanical and electrical principles
- Hands on experience using mechanical and electrical skills.
- Ability to interpret information from drawings also following written work instructions.
- Meticulous attention to detail
- Confidence working with compressed gases (Specific gas safety training and process training provided)
- Full product and process training will be given.

If you are interested in the above position, please send your CV in the 1st instance to judith.page@processsensing.com
